Vasilika

help in the care of fruit trees that the provincial government had arranged to plant on the highway near the village.

The farmers are willing to try some variations if they can use the techniques they know and understand. Cotton prices had been low in 1958. In 1959, therefore, about four or five of Vasilika's farmers planted some of their cotton lands as melon patches, intending to sell the produce in Levadhia or in Athens. By 1961, they had gone back to raising cotton, because the experiment had failed. One of Vasilika's farmers prefers to use his irrigated land as a truck farm, and he and his son sell the produce in the surrounding villages. He argues that with a vegetable crop the cash returns are faster and he incurs fewer debts.

Livestock

Each of the farm-owning households also maintains some animals. One or two horses, a mule or a donkey, some five to twenty sheep, and one or two goats constitute the range of livestock ownership for each household. The horses, as we have seen, pull the plow and the cultivators in the fields. Together with the mules and donkeys, they also serve as pack animals. The pack saddle of wood and leather is of a design that has remained virtually unchanged from Homeric times. It is used not only for carrying loads, but also for carrying people who ride sidesaddle among the paths, through the fields, and between the villages. Sidesaddle is the normal riding position for both men and women, but in the spring, when the horses are let out to pasture on the hillside, the young men of the village sometimes ride them home bareback, astride, galloping and whooping in what they call *kaouboi* fashion.

The villagers do not give their animals individual names, and they take no particular care to keep them physically comfortable. They will hitch them in the shade of a tree in the fields if that is possible, but the farmers may not remove the saddles for an entire day. The animals are beaten with switches and kicked to make them work, and children are permitted to tease donkeys. Nevertheless, the villagers occasionally pat one of their beasts and sometimes encourage children to kiss the ears of a horse and to feed it a lump of sugar.

Sheep, except for the lambs, are cared for by the shepherds. Of a hardy mountain breed capable of surviving the rigors of Greek pasturage and climate, the sheep as milk and wool producers augment the food supply and sometimes the cash of the farmers. Sheep milk is rarely drunk in liquid form, but yoghurt and cheese are prepared from it. The white cheese is a staple of the villagers' diet. They eat yoghurt less frequently and prepare it only as a special dish in milk season.

The villagers raise a special lamb each year to slaughter at Easter, but otherwise rarely eat lamb or mutton. They will consume a sheep that dies of age or disease, and they slaughter sheep for some special occasion such as a wedding, or someone's name day. At shearing time, wool is boiled in large kettles, washed in the river, sent to town for carding, and then dyed and spun into thread at home by the women.

231 With few exceptions, dogs, like the other animals, are not considered
[552] pets. They are not given names and are referred to simply as "our dog." Parents
[865] permit young children to play roughly with them and to tease and abuse them as they wish. The animal is fed scraps of bread once a day, and there is a feeling that there may be some advantage to keeping it slightly hungry. The dogs also act as scavengers whenever horses or other large animals die in the vicinity of
[178] the village. Further evidence for the completely utilitarian attitude of the
[373] villagers toward their dogs is the diminution of the number of these animals in the village since the introduction in 1960 of electric lights on the street and paths of Vasilika.

Variations in Wealth

423 This chapter has dealt with the most important methods of providing
511 subsistence and income in Vasilika from the standpoint of the typical small
592 farm owner. However, all the farming households of Vasilika do not have land or other resources of equal value. Among the thirty-five land-owning households of Vasilika there are perhaps eight whose total holdings range from one to
[422] fifteen *stremata* and who own only a few sheep and goats. These households usually own donkeys, however, and occasionally, a mule and some chickens. Along with the four farm households in Vasilika who own no land whatever,
[464] these eight are the groups who must find wage labor in the village or in the neighboring communities. The level of living of both these groups is close to what is needed for bare subsistence, and a bad agricultural season leaves them close to destitution.

Another eight households are those of farmers whose land-holdings range from about fifteen to thirty *stremata* and who maintain themselves at what is considered an acceptable standard in the village, but who do so by a narrow margin. In several instances, these are households with children too young either to help in the farm work or to supplement income by wage labor.

Slightly more than half of the total number of farm-owning families—some nineteen—might be considered substantial farmers who may have better or worse years but whose present situation is reasonably secure. The largest land owner in the village has about 150 *stremata*, several men have something like 100, and the rest have holdings of 40 or 50 *stremata*. Forty *stremata* are re-
[422] garded by common consent as a minimum for a decent standard of living for a farm household of four. Among these farmers, some own enough sheep to get additional income from selling surplus animals, but most have just enough sheep to supply milk, cheese, and meat for household needs. These farmers also have one or two horses.

434 A gross difference in the quantity of property owned is not the only fac-
511 tor effecting the income variation among the households of Vasilika. Soil fertility and drainage conditions are not the same on all the village lands, so some farmers get greater yields from smaller plots of well-situated fields. In addition,
